

Guide for Casting on Pico

To cast your pico on a screen, make sure your TV or Laptop supports Miracast. If the TV/Laptop doesn't support Miracast screening, use a miracast device (similar to chromecast).

Step 1

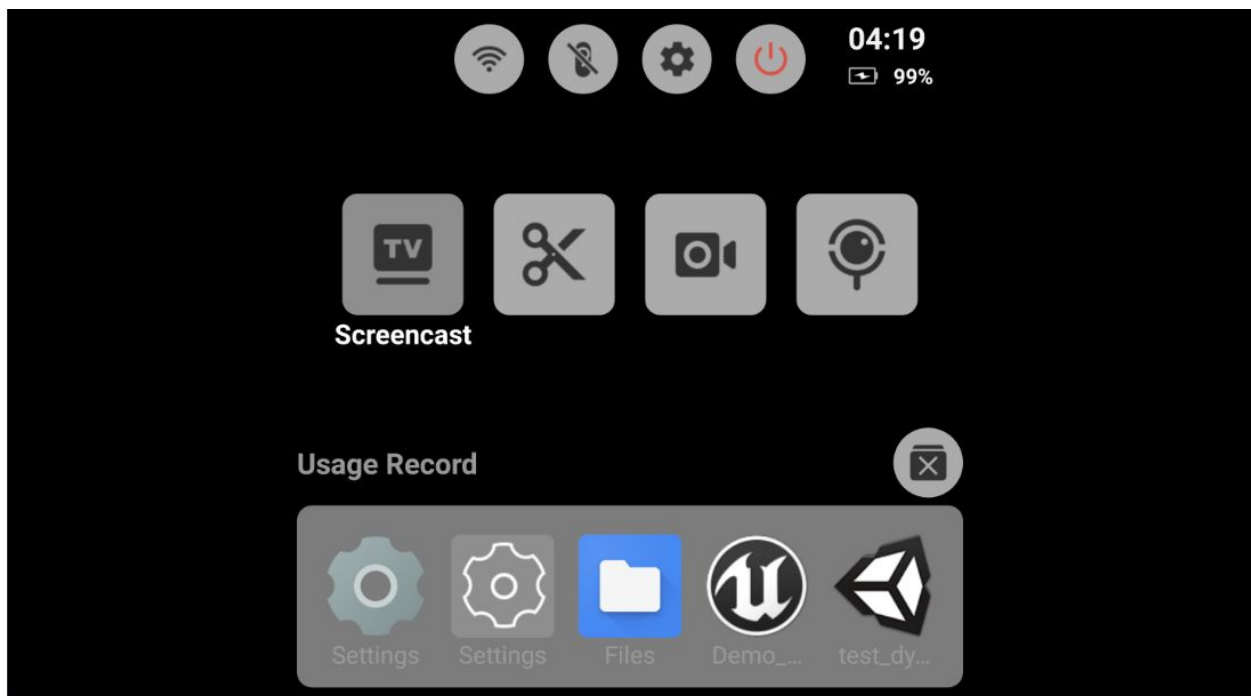

Open your TV/Laptop and find the Mira application on your TV or laptop. (Name could be different)

Step 2

Double click "Home" button on your Pico to pop up the shortcut panel.

Step 3

Press on the "Screencast" button

Step 4

Choose the device you want to connect to. (Either TV, Laptop or cast device)

Step 5

You should be able to mirror your screen from the Pico to your TV/Laptop

Note : If you need to project a monocular view, please enter the 2D Settings, find “Connected devices” and click to enter, make sure the “Single-eyed Display” is enabled.
